List of Figures	v
Part 1. Introduction to potential theory	1
Chapter 1. Harmonic functions	3
1.1. Preliminaries	3
1.2. Fundamental harmonic functions	7
1.3. Mean value principles	8
1.4. Weyl's lemma	15
1.5. Maximum principles	16
1.6. Green functions	17
1.7. Green's formula	20
1.8. Poisson kernels and Poisson integrals	21
1.9. The Dirichlet problem for balls	24
1.10. Harnack principle	26
1.11. Positive harmonic functions on a ball	29
1.12. Fatou's theorem	32
1.13. Remarks	35
Chapter 2. Superharmonic functions and subharmonic functions	37
2.1. Semicontinuous functions	37
2.2. Superharmonic functions and subharmonic functions	40
2.3. Convex functions and subharmonic functions	43
2.4. Generalized Laplacian	45
2.5. Approximation of superharmonic functions	47
2.6. Integrability	49
2.7. Spherical mean values	50
2.8. Convergence of mean values	52
2.9. The Poisson modification	54
2.10. Choquet's topological lemma	55
2.11. The Riesz representation theorem for superharmonic functions	57
2.12. Remarks	61
Chapter 3. The Dirichlet problem	63
3.1. The Perron-Wiener-Brelot method	63
3.2. Harmonic measures	67
3.3. Boundary behavior of PWB solutions	70
3.4. Green functions for general domains	74

3.5.	Green functions and PWB solutions	77
3.6.	Harmonic minorants	78
3.7.	The Riesz decomposition	80
3.8.	Remarks	83
Chapter 4.	Capacity and its applications	85
4.1.	Polar sets	85
4.2.	Reduced functions	88
4.3.	Capacity	89
4.4.	Capacitability	97
4.5.	Cartan's theorem	100
4.6.	Fine properties of regularized reduced functions	100
4.7.	Kellogg's property	104
4.8.	Wiener's criterion	105
4.9.	Remarks	109
Chapter 5.	The Martin boundary	111
5.1.	Outline of the Martin integral representation	111
5.2.	Definition of the Martin boundary	112
5.3.	Extension of balayage	114
5.4.	Minimal Martin boundary	115
5.5.	Martin integral representation	120
5.6.	Minimal fine topology	122
5.7.	PWB ^h solution	126
5.8.	The Fatou-Naim-Doob theorem	128
5.9.	Remarks	130
Part 2.	Potential theory on nonsmooth domains	133
Chapter 6.	Nonsmooth domains — backgrounds and definitions	135
6.1.	Martin boundary and boundary Harnack principles	135
6.2.	Lipschitz domains and NTA domains	140
6.3.	Uniform domains, John domains and inner uniform domains	143
6.4.	Quasihyperbolic metric and QHB domains	145
6.5.	Capacity density condition and CDC domains	148
6.6.	Capacitary width — Why exterior conditions can be removed.	150
6.7.	Remarks	151
Chapter 7.	Boundary Harnack principles and Carleson estimates	153
7.1.	Carleson estimates	153
7.2.	Brelot technique	154
7.3.	Equivalence between the global boundary Harnack principle and the global Carleson estimate	
7.4.	Equivalence between the local boundary Harnack principle and the local Carleson estimate	
7.5.	Domar's argument	161
7.6.	Global boundary Harnack principle for QHB domains	163
7.7.	Local boundary Harnack principle for uniform domains	165

Part 1

Introduction to potential theory
